HIWIN Corp exhibits latest product offerings at SEMICON West

Elgin, IL

HIWIN USA will exhibit its latest product offerings at SEMICON West, **July 13-16 located at the MOSCON Center in San Francisco CA.** A number of automation solutions for the semiconductor and electronics manufacturing industries will be featured, including HIWIN KK single axis robot solutions.

The KK single axis stage combines both ballscrew and guideway to achieve better performance on accuracy, stiffness, rapid installation, and space saving. The optimized U-rail not only guides the movement of the slider being driven by the ballscrew, but also can be used as a structural component when assembled into a multi-axis motion system. Compact, light weight and in a variety of sizes, the KK single axis robot easily incorporates into a system design and is simple to install and maintain. HIWIN offers the KK robot well equipped with required accessories to assist with any integration project.
