PRESS RELEASE

INTRODUCING LINEARSTAGES.HIWIN.US

February 16, 2021 - Hiwin is pleased to announce the launch of linearstages.hiwin.us, an animated and interactive microsite dedicated to help you choose among our most popular linear stages. Engineers can save time in design and installation by specifying linear stages, rather than all the individual components to build the stage.

What is most important to you? High Speed? High Accuracy? Long Stroke? Choosing between linear motor stages and ballscrew stages? Our engineers can help you to size single and multi-axis motion systems and can customize a solution to meet your needs.

Visit the site to learn about Hiwin linear motor and ballscrew stages, download CAD models and catalogs, including 4 multi-axis stages made with Hiwin single axis stages.

- NPS – Nanometer Accuracy
- KK – General Automation
- LMX1K – Longer Stroke and Fast Acceleration
- LMSSA – As low as 0.1 μm Resolution and Low Velocity Ripple

All Hiwin stages are made with genuine Hiwin components that are known around the world for top-level quality, so you know the stages will have a long life. Sales engineers are available by phone, email, or web conference. Please reach out to one of our sales managers to discuss your design project or learn more about HIWIN products.
